

Location of investigations, pilot schemes and
monitoring being undertaken during the period
2015-2020 in the Wye catchment:

Following improvements under the National Environment Programme (NEP) at a number of our wastewater treatment works in the period 2010-2015, our activities under the NEP for the catchment in 2015-2020 are related to carrying out a programme of investigations, pilot schemes and monitoring.

This data set shows the areas where we are undertaking these investigations and installing monitors.

Our current programme will allow us to:

- Base any future improvement programme on robust evidence and sound science, ensuring we get the best environmental benefits for our customers for any investment made.
- Identify new technology to achieve the potential tighter limits on wastewater treatment as identified in the Nutrient Management Plan. Today's current technology cannot reliably achieve these tighter limits.
- Enable others to understand their impact and play their part in creating a better water environment.
